

# EIT Quick Test Intl.

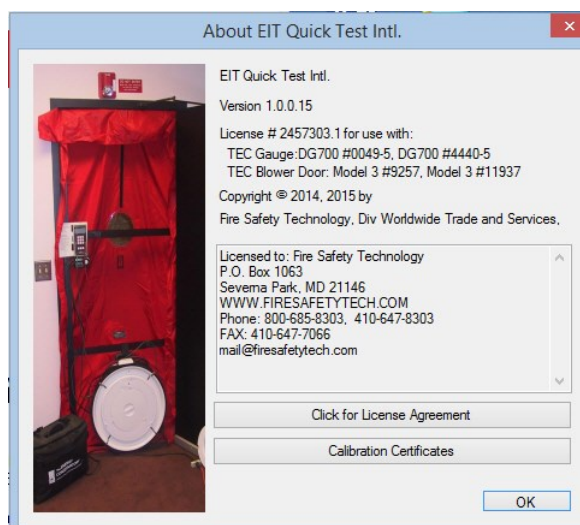

## Special Feature

### Calibration Certificates:

In the Help>About screen there is a box “Calibration Certificates”. Normally if you click on this box your calibration certificates will open along with a data sheet detailing the NFPA calibration requirements and an order form for recalibration of your gauge and/or fan.

If you have had your gauge or fan recalibrated or your copy of EIT Quick Test Intl. is an upgrade, you will need to add your (new) calibration certificates.

To do this scan your new certificates as a .pdf file and copy them to the reference:calibration certificates folder. This way you will always have a copy of your current certificates with you should you be asked.
